Createspace. Paperback. Book Condition: New. This item is printed on demand. Paperback. 134 pages. Dimensions: 11.0in. x 8.5in. x 0.3in. Over the last decade, concern about the issues of global climate change and rising greenhouse gas emissions has grown significantly. This concern has spurred an elaborate series of international meetings and agreements seeking to stabilize atmospheric greenhouse gas concentrations. In 1992, at Rio de Janeiro, more than 160 countries, including the United States, signed the United Nations Framework Convention on Climate Change (UNFCCC). The signatories were in agreement regarding the potential negative effects of climate change under a business as usual future. Under the Convention, the developed countries (referred to as Annex I countries) were assigned primary responsibility for addressing the climate change issue. However, at the first two Conferences of Parties<sup>1</sup> called to discuss methods for implementing the Convention, a strong debate ensued regarding what policy instruments should be used to curb global climate change, and what, if any, targets and timetables should be set for achieving emission reductions. Most Annex I nations announced a series of voluntary targets and initiatives for meeting emission reduction goals. By 1996, it had become clear that greenhouse gas emission levels in most Annex I countries were rising despite voluntary efforts to reduce emissions. A consensus for firmer targets and timetables was building. At the Third Conference of Parties, held in Kyoto, Japan in December 1997 a series of firm emission reduction targets were agreed to by the Parties. Developed countries agreed to reduce their greenhouse gas emissions by an average of 5.2 percent from 1990 levels by 2008-2012. While the resulting Kyoto Protocol was signed in 1997 by the United States and other industrialized countries, it was never ratified by the U. S. Senate, and the Administration recently announced its intention of...
